Subject: Now Your Fueling Stations can be Relocated as Easily as any of Your Equipment.

Hello {{first_name}},

We don't need to tell you about the problems inherent with refueling any kind of equipment.

You also know the closer your refueling source is to that equipment, the more cost-effective the operation, particularly during periods of escalating fuel prices. These problems, together with the wear and tear on equipment, the cost of manpower, and the wasted time come right off your company's bottom line.

Finally, help has arrived...and its name is Black Rhino!

Black Rhino can help solve your refueling problems in one secure, convenient and mobile package.

Black Rhino is a self-contained fueling system mounted on a twin-axle trailer that can be relocated where you need it. Now your fuel source can always be close to your equipment. Black Rhino eliminates the need to install in-ground or above-ground tanks with their environmental risks and the time-consuming regulations that go with them. And Black Rhino is a complete and efficient, self-contained refueling station.

Black Rhino can be towed into position behind a pickup truck. Once in place, diesel fuel, gasoline, or any other liquid can be loaded into the tank by Western Fleet Services or your local fuel supplier. It's that easy to set up an efficient, safe and secure fuel station for just about any purpose.

Black Rhino tanks are available in 550, 1,000, 2,000, and 4,000 gallon capacities. Custom versions are available in any other size and for any liquid desired...go ahead, give us a challenge!

Subject: Black Rhino is the Fuel Safe

Hello {{first_name}},

The Black Rhino Fuel Safe is the only commercial use fuel tank system on the market that meets or exceeds all EPA, Federal, State, local codes and all aspects of the NFPA 30 and 2003 international fire code.

Here are the many benefits that come along with a Black Rhino Fuel Tank:

- Liquid tight, 110% secondary metal containment walls welded to the floor of the trailer 360° around main tank.
- Black Rhino is available in a multitude of fuel capacities for all diesel and gasoline products.
- Filter cap with lock.
- Atmospheric vent.
- Emergency vent.
- Fill level sight gauge.
- 110-volt explosion proof pump with emergency shut-off that will run off an electric outlet or generator.
- Spring loaded reel with 50' of grounded fuel hose.
- Diesel or gasoline rated fuel nozzle.
- Four diesel placards, one on each side of the tank.
- Secondary containment drainage and filter system.
- Removable trailer hitch that it detached when unit in place.
- Hazmat Spill Kit – used for clean-up of incidental fuel spills.
- Four no smoking signs, one on each side of the tank.
- Four crank-down stabilizing pads.
- Two fire extinguishers.
- Two-axle trailer with metal floor.

Subject: Black Rhino is available for purchase or rent as individual units or in quantity!

Hello {{first_name}},

Black Rhino can be adapted for any fluid in almost any application!

- Diesel Fuel
- Gasoline
- Waste Oil
- Aircraft Fuels
- Gasoline
- Solvents
- Kerosene
- Auto Racing Fuels

Black Rhino is built solid to give years of service even in the most remote locations and under the most rigorous and adverse conditions. The tank and containment area are mounted on a rugged twin-axle metal floor trailer.

Once Black Rhino is in position, four crank-down stabilizer pads are employed, one on each corner of the trailer. These stabilizer pads are designed for use on uneven ground, common to most construction sites. When the unit is secure, each stabilizer can be locked so that the trailer cannot be moved once it is set in place.

Customize to your specifications and to your company's needs:

- Two compartment tanks
- Skid Mounted
- Oil Storage
- Generators
- Compressors
- Generators
- Storage Cabinet
- Large Capacity
- Tool Box
- Double Wall and UL 285 Tanks
- Skid Mounted
